+852 9134 1868 · luhenry620@gmail.com · hongzhangxiu.xyz

Business operator and hands-on AI prototyper with 12 years at SAIC-GM-Wuling and an MSc in Applied AI. Combines operational problem discovery with **Python prototypes, retrieval workflows and measured model validation**.

SELECTED AI WORK

Offline Audit-Report Proofreading MVP

Independent personal project · 2026

Problem: repetitive document checks with sensitive text that needs local processing.

Built: a Python/Flask workflow connecting local model inference, vector and keyword retrieval, terminology/institution checks and structured suggestions. Retrieved references inform the prompt; a reviewer retains final judgement.

Design decisions: use retrieval for evidence, deterministic checks for known terms, and human review for consequential edits. The output is a review aid rather than an automatic final report.

Walkthrough: input → pre-checks → retrieved references → suggested edits → human review.

Aspect-Based Sentiment Analysis of Vehicle Reviews

MSc dissertation · 2025.10–2026.05

Prepared **2,226 raw comments → 859 annotated records → 427 high-quality training records**; built a dual-task, four-head RoBERTa model for product and marketing-related analysis.

Improved experimental F1 from **0.21 to 0.6705**; checked five random seeds and completed a separate 47-sample blind review. Used the outputs for brand and customer-perception analysis.

Discussion: data quality, validation choices and how outputs inform customer analysis.

BUSINESS GROUNDING

Intelligent Mobile Robotics — New-Business Exploration 2024.08–2025.03

- Translated technical prototypes into customer scenarios, product materials and tailored proposals; identified three high-value prospective clients and mapped 20+ target companies.
- Worked with finance on materials, R&D, software and subcontracting costs to support quotation and commercial-feasibility discussions.

TOOLS USED

Python · Flask · PyTorch · Transformers · ChromaDB · Vector/keyword retrieval · Prompt design · Structured outputs · Git

Selected AI Work: one-page project companion available with this CV.

HENRY LU

AI Applications & Business Process Improvement

CAREER EXPERIENCE

SAIC-GM-Wuling · Selected roles, 2014–2025

General Manager, Foshan Direct-Retail Store 2023.09–2024.08

- Reconfigured staffing, sales/after-sales coordination, inventory and profit reporting; worked with finance to identify cost pressure and local revenue opportunities.
- Losses narrowed progressively to **near break-even in July 2024**; achieved **117% of the March 2024 sales target** (17 vehicles).

National Direct-Retail Operations & Talent Development 2022.01–2023.09

- Led clarification of department and role responsibilities. Worked with benchmark stores, HR and finance to develop staffing/productivity standards and management/professional career paths.
- Organised store-leader change discussions and four partner-level training programmes; managed course supply, learning schedules and assessment tracking on an existing group platform.

HQ Operating Support / Suzhou Store Establishment 2021

- **Jan–May, HQ:** built operating reports and exception tracking using the existing CRM; coordinated store data entry and collection, rolling plans, departmental OKR alignment and review materials.
- **Around Jun–Dec, Suzhou:** established delivery/operations, pop-up and after-sales touchpoints over approximately four to five months; coordinated local site resources and store execution.

Product Engineering → User Operations → Regional Dealer Operations 2014–2020

- Owned DC/DC product-engineering work and supplier technical coordination in 2014–2016, including thermal/structural trade-offs, manufacturing reviews and vehicle validation.
- Collected **15,000+ customer-feedback items over eight months**, informing 3,000+ product-improvement points.
- Managed seven dealers in Fujian/Zhejiang in 2019H2–2020H1; subsequently managed seven in Hebei. Supported campaigns, local resources and sales-conversion reviews.

WHAT I BRING TO AN APPLICATION TEAM

Business discovery: map the user, current steps, available evidence and failure cost before choosing an AI solution.

Evaluation: define a baseline, separate research/model metrics from business outcomes, and inspect failure cases.

Adoption: translate changes into responsibilities, training and operating routines with frontline teams.

EDUCATION & LANGUAGES

Hong Kong Chu Hai College · MSc, Applied Artificial Intelligence · 2026

Guangxi University · Bachelor's degree, Transportation · 2013

Vehicle Engineering focus

Mandarin (native): Event hosting, industry report writing and departmental briefings.
English: Workplace reading and writing, everyday conversation and prepared presentations in meetings.
Cantonese: Conversational in everyday settings, with listening and speaking skills continuing to improve.

Interested in AI Business Analyst, business-facing AI Product, AI Applications and Business Automation roles.
